

## MATLAB EXPO 2018

# Progettazione di un sistema di cancellazione attiva del rumore stradale da rotolamento

Alessandro Costalunga

*Software Designer*

*R&D Audio System*

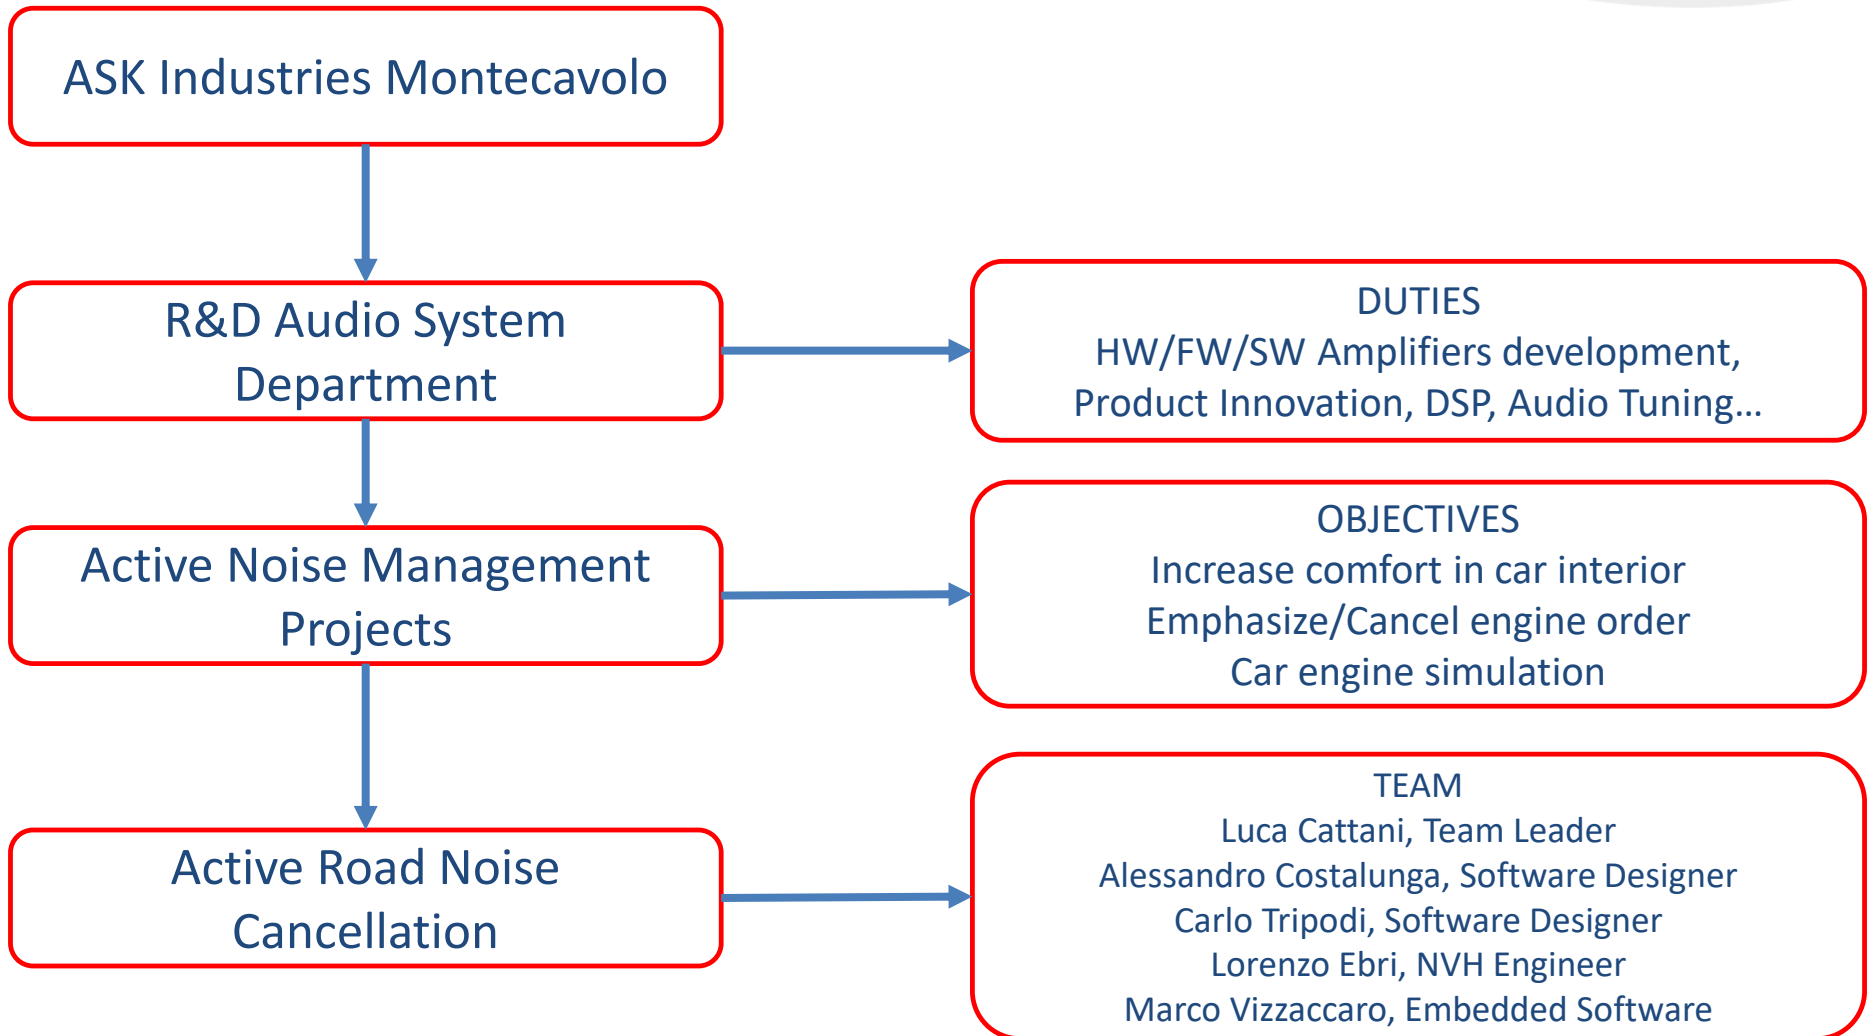

*Ask Industries S.p.A*

Global Supplier of Acoustic and Communication Technology for OEM customers in the Automotive Industry.  
Main activities: Design, development and manufacturing of loudspeakers, amplifiers, antennas and cables for the automotive industry.

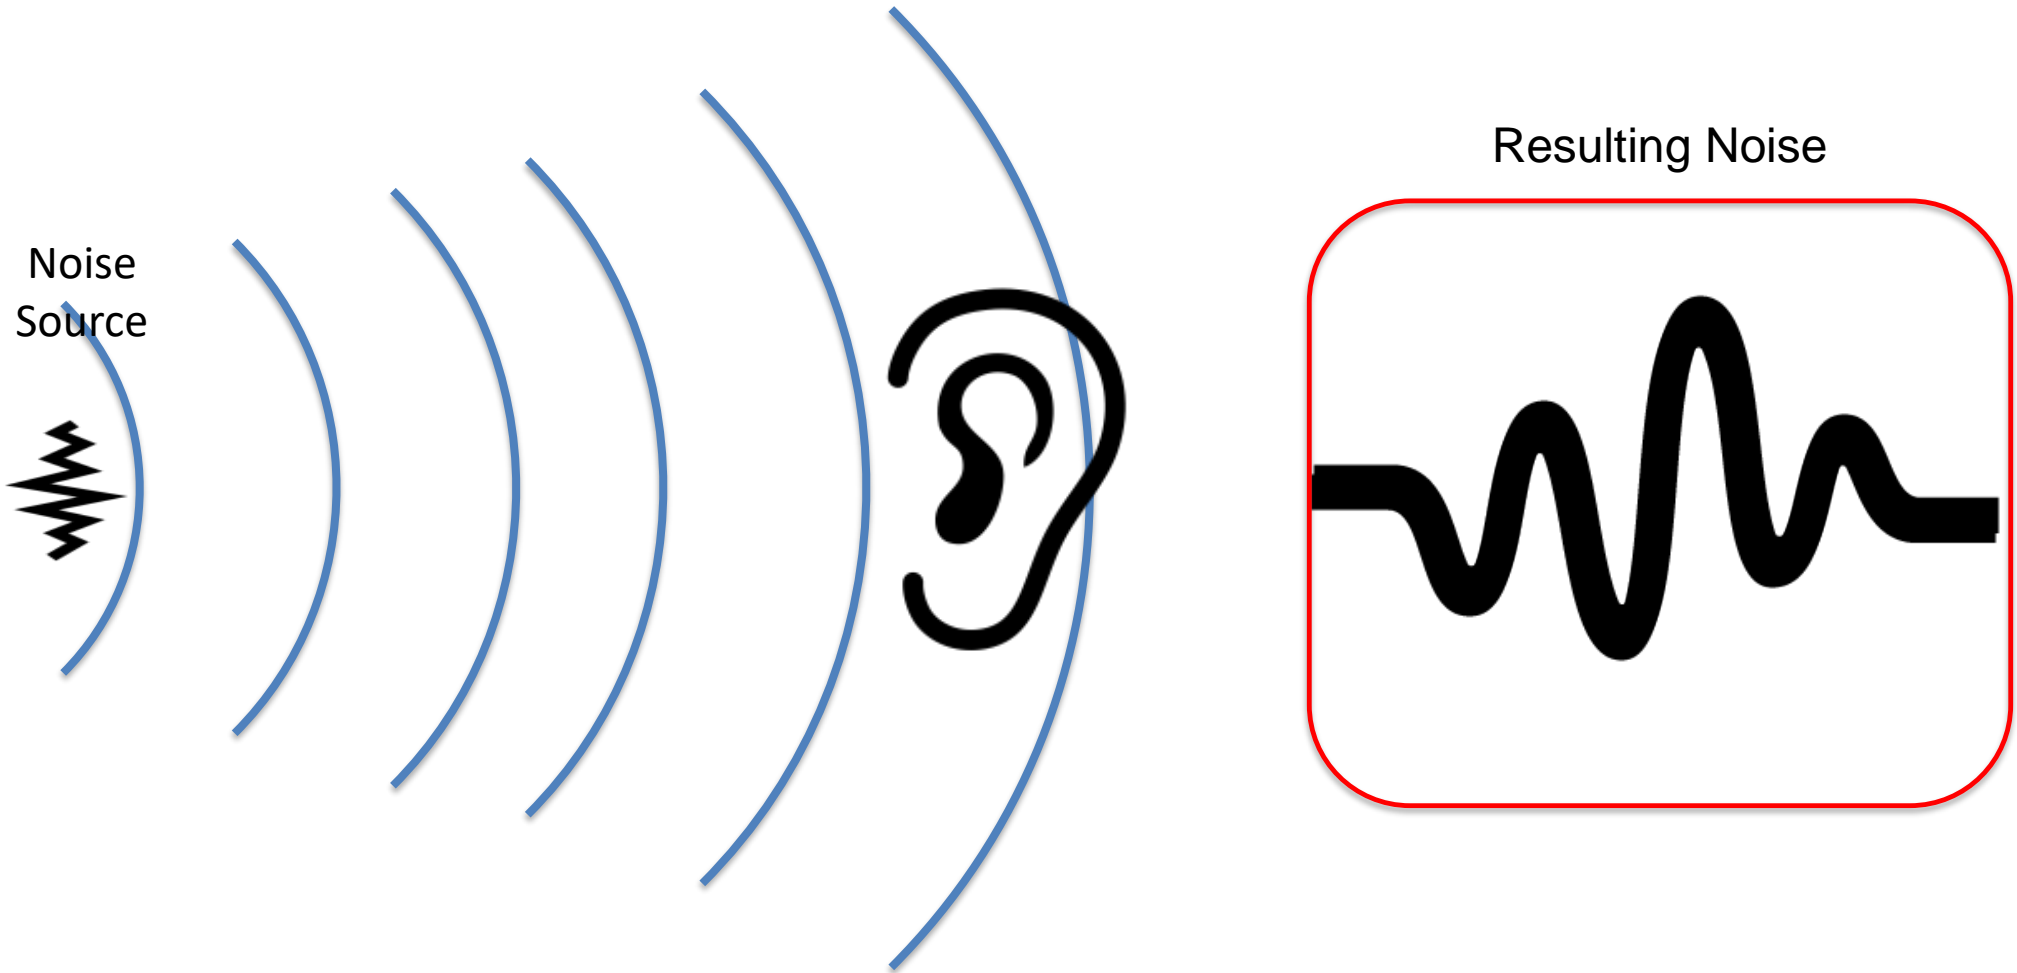

1965: Foundation

2015: enters in  
JVC KENWOOD Group

# Active Noise Cancellation Systems

# Active Noise Cancellation Systems

# Problem: Road Noise

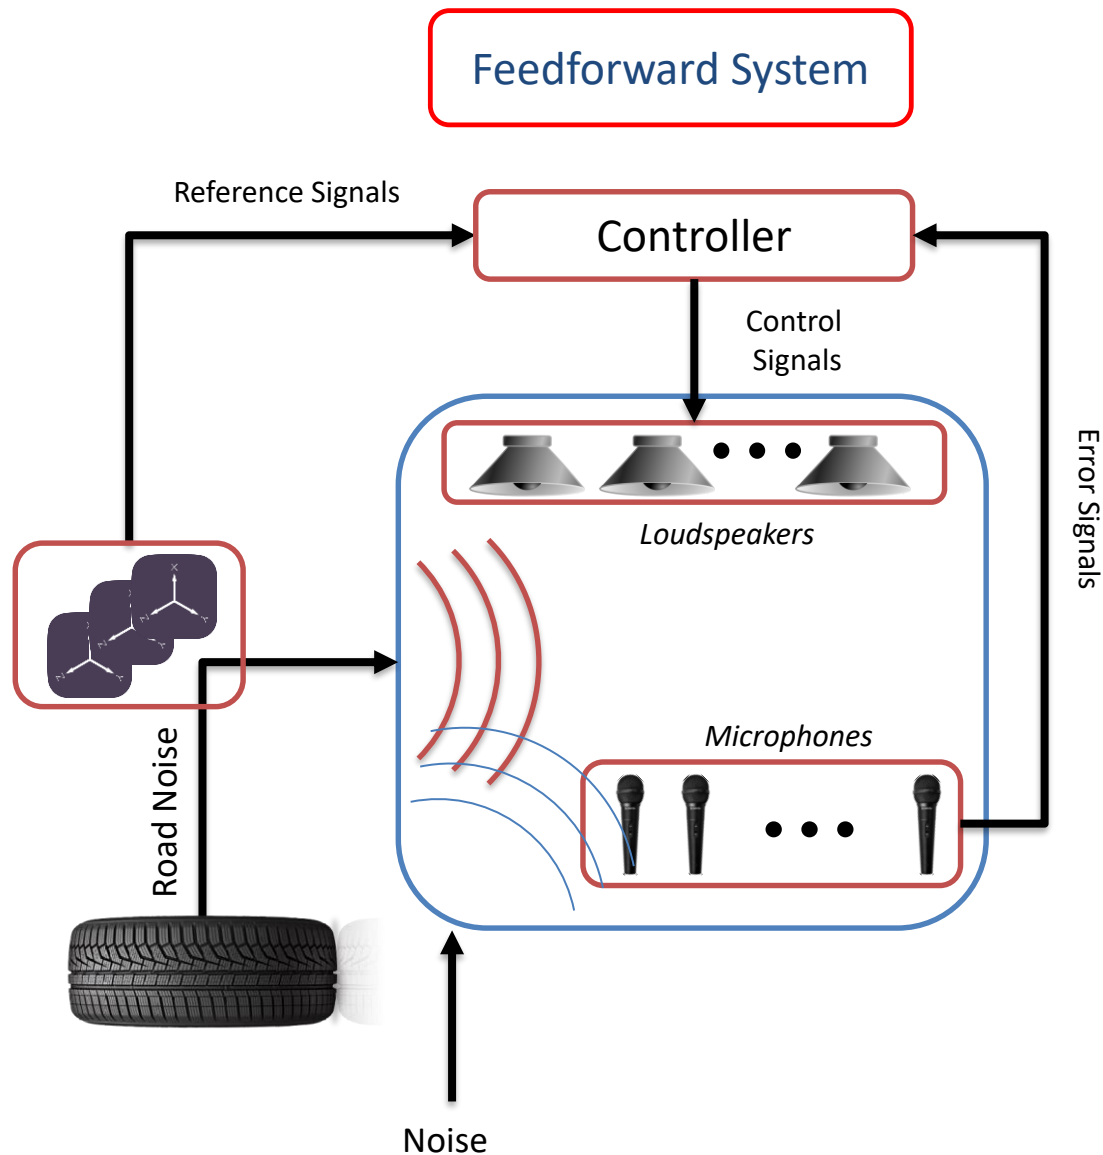

Air-borne  
Road Noise

Structure-borne  
Road Noise

# Active Control System Approach

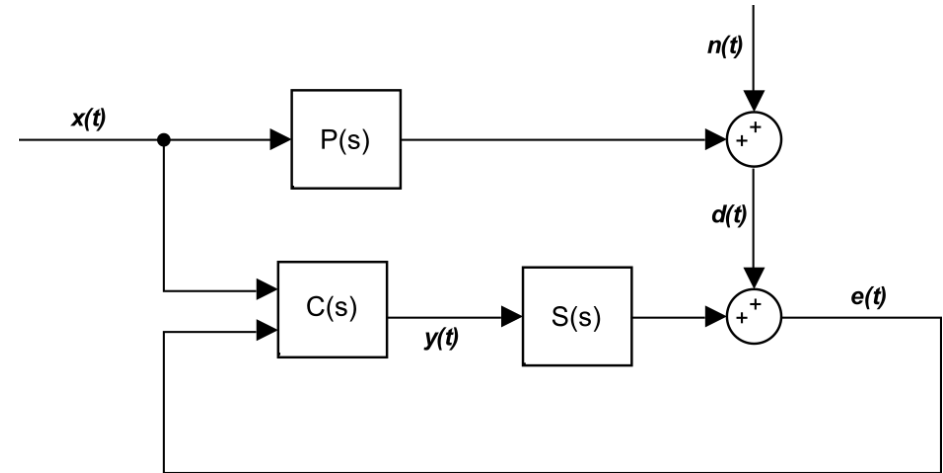

Control Algorithm

Reference Signals Selection

On-the-field Validation

# Control Algorithm

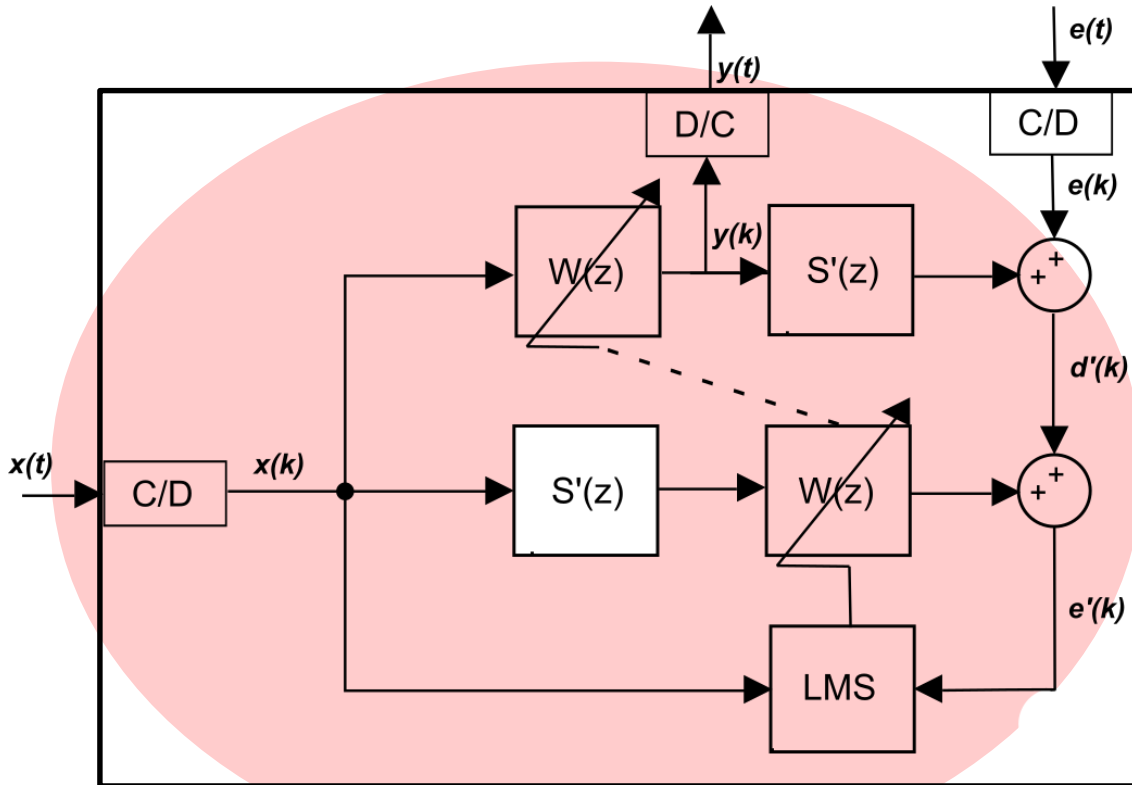

Goal:

$$C(s) = -\frac{P(s)}{S(s)}$$

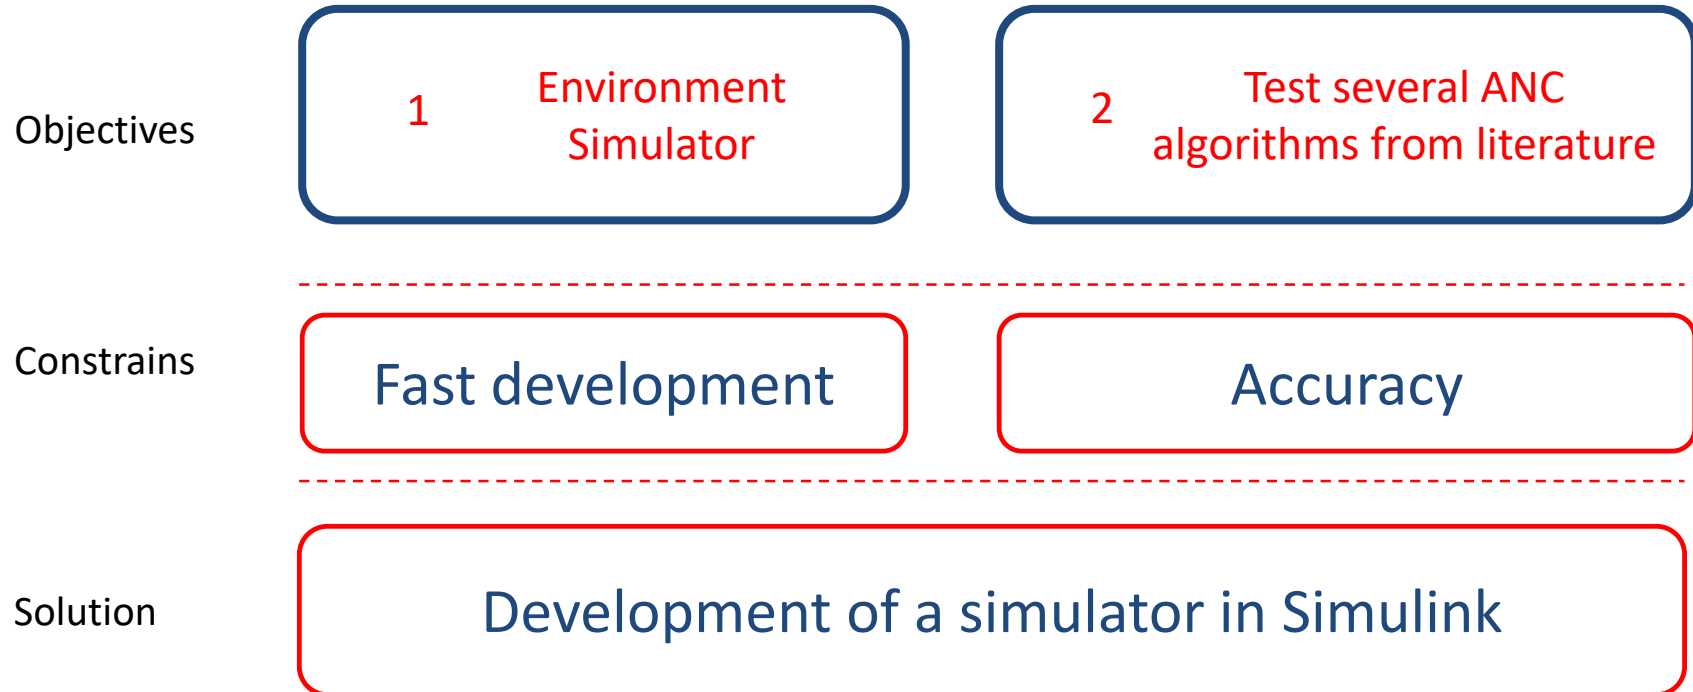

# Control Algorithm

## Multichannel Modified Filtered-x Least Mean Square

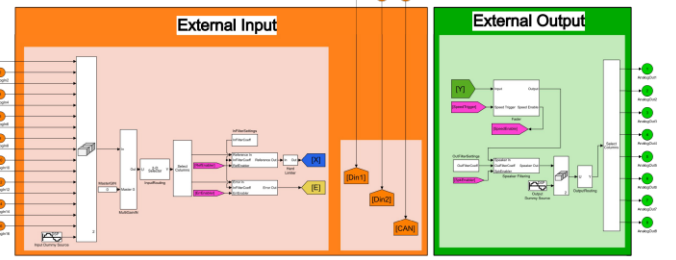

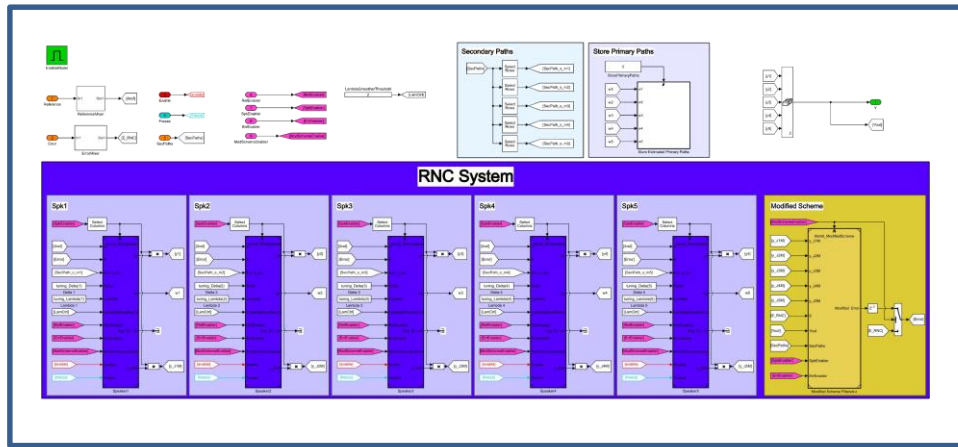

1 Environment Simulator

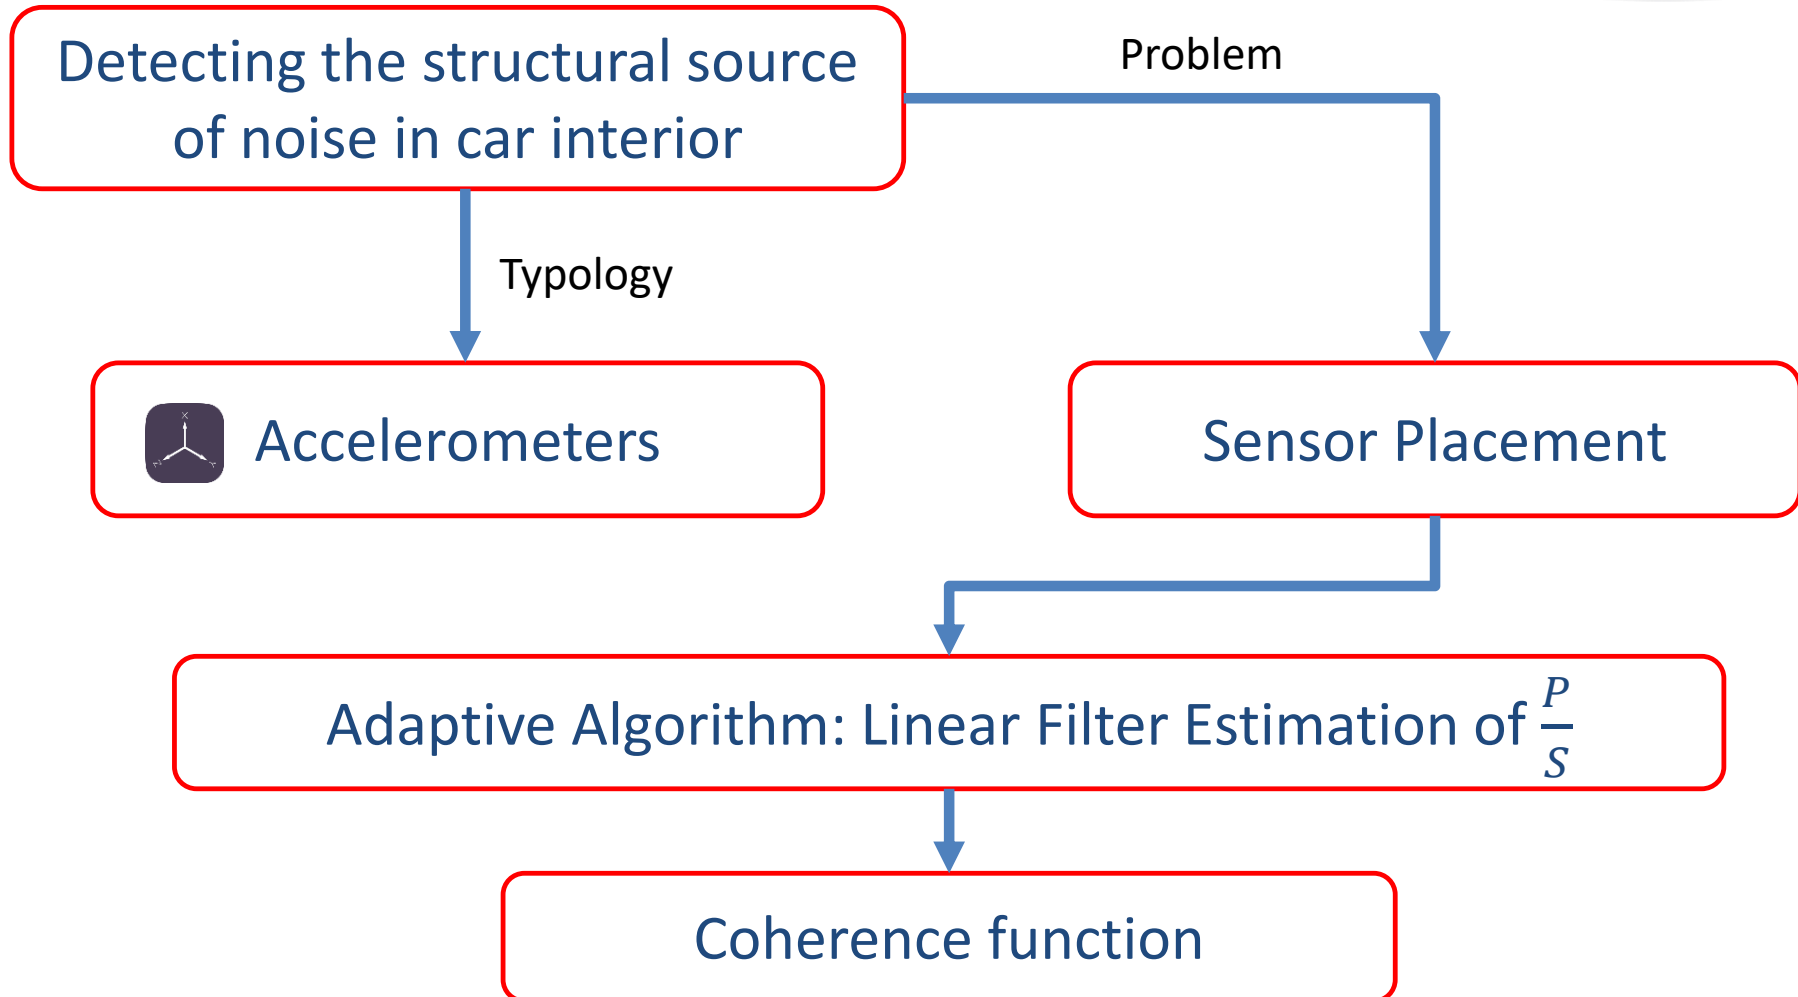

2 Test several ANC algorithms from literature

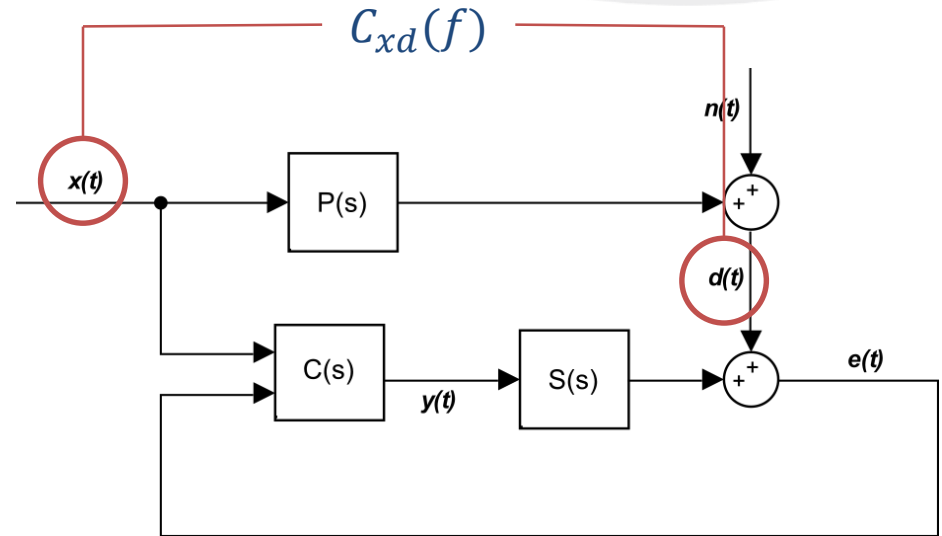

- Model Based Design
- Graphical Environment
- Rapid Debug
- Code generation

Coherence is a function of frequency with values between 0 and 1 which measures the relative linearity between two signals

Maximum theoretical noise reduction:  
$$-10 \log_{10}[1 - C_{xd}(f)]$$

Development of a standalone application in  
MATLAB

Collect and explore large signal dataset

Signal Processing

Easy to use: Graphical User Interface

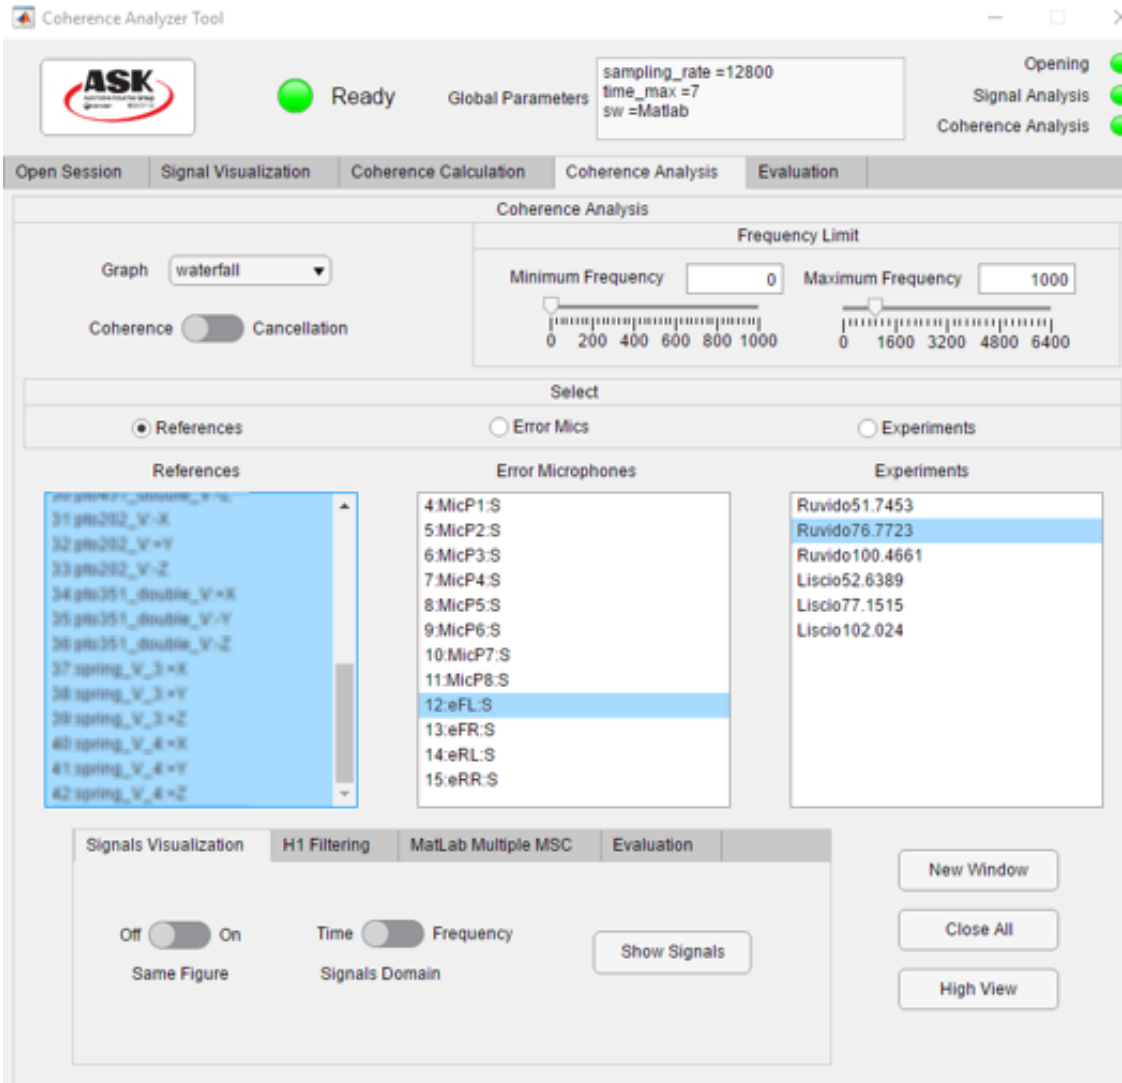

Fast implementation

- Smart data types
- Wide set of build-in functions
- App Designer API
- Quick debug
- Complete documentation

# Reference Signal Selection: Analysis

Performance Analysis

Tight Deadlines

Constant Algorithm  
improvements

Rapid Prototyping  
Approach

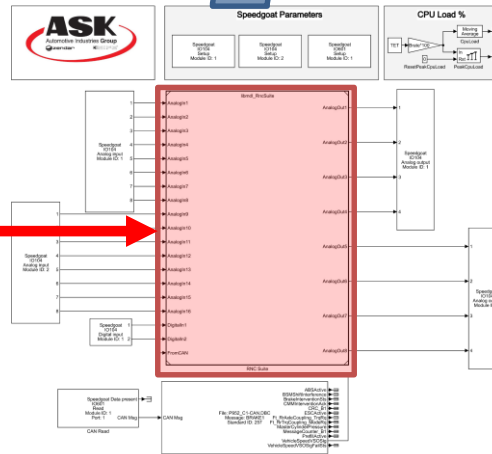

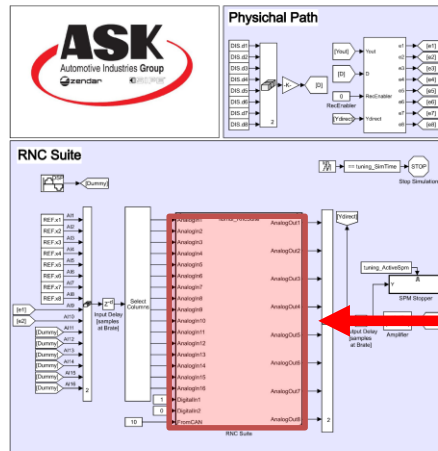

**speedgoat**  
real-time simulation and testing

# Rapid Prototyping Approach

Expensive in term of time and resources

## Alfa Romeo Giulia

2.0 L4 TurboGasoline 200Hp RWD AT8

Cancellation performed on Driver Seat

6 Accelerometers; 2 Loudspeakers; 2 Microphones

## Rough asphalt, 50 km/h

Cancellation on left ear  
Average: 3db  
Peak: 8db @ 180Hz

Cancellation on right ear  
Average: 2.5db  
Peak: 9db @ 210Hz

RNC system for automotive applications is feasible and effective

MATLAB and Simulink are the best options for the development of innovative systems

Rapid prototyping with MATLAB and Simulink is cost and time effective
