I need help. One of my cylinders is blocked. I will shut down your line in 15 hours

What do you expect from predictive maintenance?

- Maintenance cares about day-to-day operations
 - Reduced downtime
- Operations & IT look at the bigger picture
 - Improved operating efficiency
- Engineering groups get product feedback
 - Better customer experience
- Upper management wants to drive growth
 - New revenue streams

Industrial Internet of Things

Industrial Internet of Things

Agenda

- Where do you start?
- What if you don't have the data you need?
- How do you reduce data transmission and storage costs?
- How do you deliver your analytics to different users?

Challenges: Where do you start?

- How can I easily perform feature extraction?
- What algorithms do I have access to?
- Where can I find examples I can use?

**What is the
condition of my
machine?**

**Condition
Monitoring**

**When will my
machine fail?**

**Predictive
Maintenance**

Solution: Predictive Maintenance Algorithms

Condition Indicators

Remaining Useful Life

- Signal based features
- Model based features
- Feature selection

Agenda

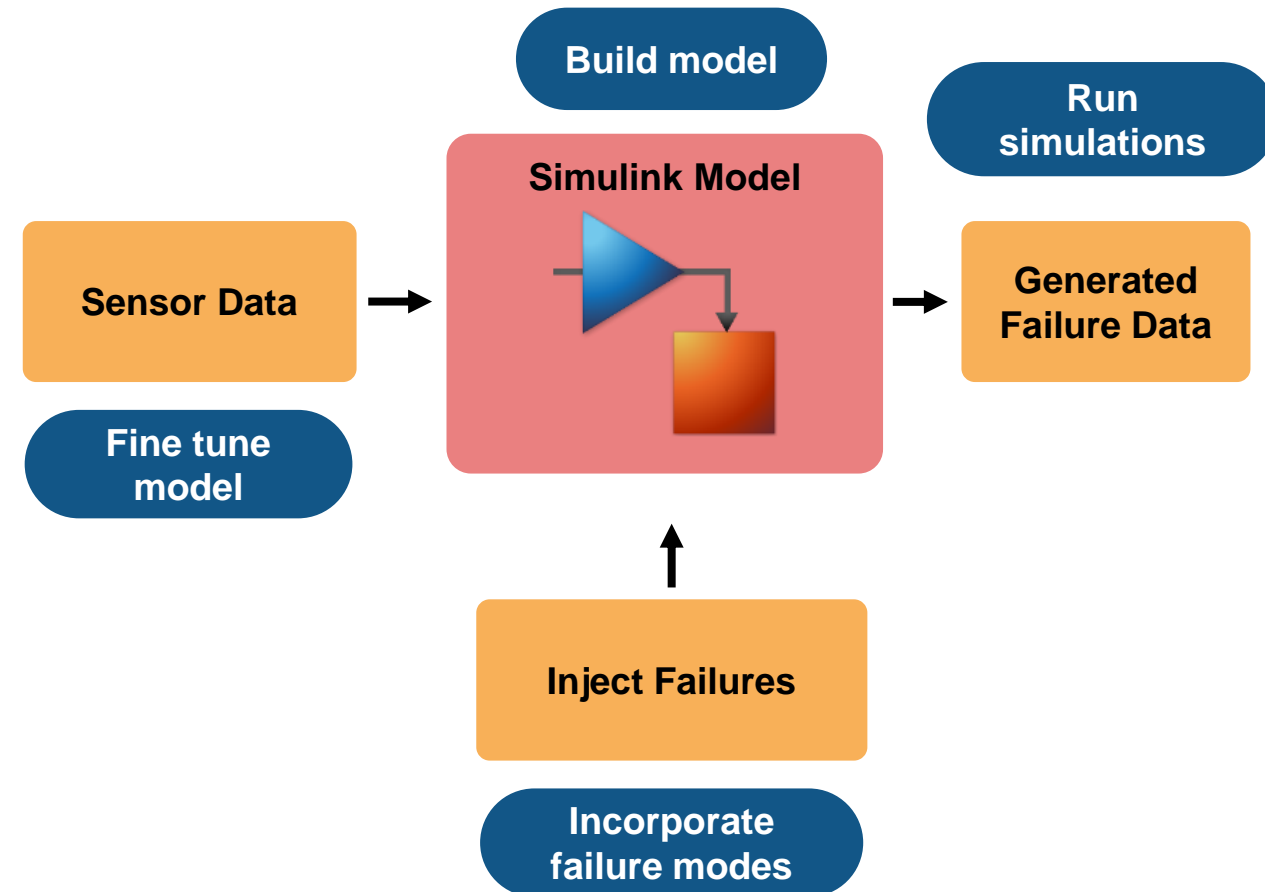

- Where do you start?
- What if you don't have the data you need?
- How do you reduce data transmission and storage costs?
- How do you deliver your analytics to different users?

Challenges: What if you don't have the data you need?

- Lack of labelled failure data
- Multiple failure modes and failure combinations possible
- Different machines can show different behavior for the same failure

Solution: Generating failure data from Simulink models

- How do I model failure modes?
 - Work with domain experts and the data available
 - Vary model parameters or components
- How do I customize a generic model to a specific machine?
 - Fine tune models based on real data
 - Validate performance of tuned model

Agenda

- Where do you start?
- What if you don't have the data you need?
- How do you reduce data transmission and storage costs?
- How do you deliver your analytics to different users?

Challenges: How do you reduce data transmission/storage costs?

- 1 day ~ 1.3 GB
- 20 sensors/pump ~26 GB/day
- 3 pumps ~ 78 GB/day
- Satellite transmission
 - Speeds approx. 128-150 kbps,
 - Cost \$1,000/ 10GB of data
- Needle in a haystack problem

Pump flow sensor 1 sec ~ 1000 samples ~16kB

Solution: Feature extraction at the Edge

- How do you extract features?
 - Signal processing methods
 - Statistics & model-based methods

- Which features should you extract?
 - Depends on the data available
 - Depends on the hardware available

- How do I deal with streaming data?
 - Determine buffer size
 - Extract features over a moving buffer window

Edge Devices

qMean	qVar	qSkewness	qKurtosis
38.4945	9.2306	-0.5728	2.4662
qPeak2P...	qCrest	qRMS	qMAD
15.2351	1.1553	38.6141	2.5562

Algorithm Development for Feature Extraction at the Edge

Processing and Extracting Features from the Simulation Results

The model is configured to log the pump output pressure, output flow, motor speed and motor current.

```
1 ens = simulationEnsembleDatastore('.\Data');
2 ens.SelectedVariables = ["qOut_meas", "SimulationInput"];
3 reset(ens)
4 data = read(ens);
5 [flow,time_unit] = preprocess(data);
6 figure;
7 plot(flow.Time,flow.Data);
```

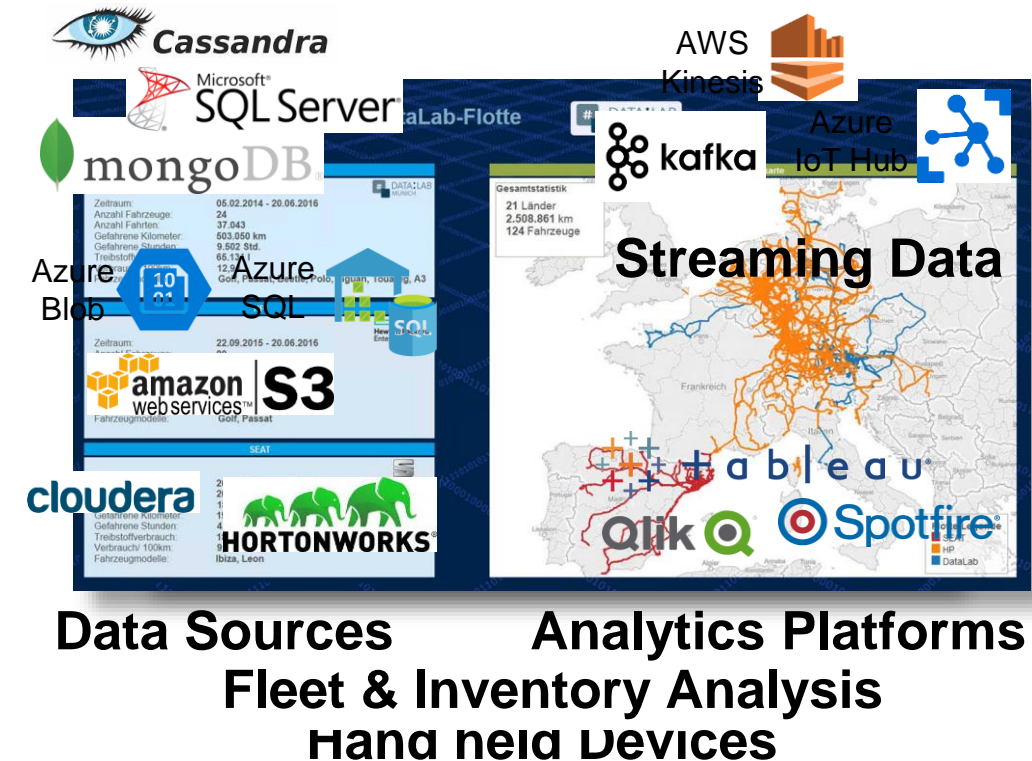

```
8 % Decide which features to extract
9
10 ens.DataVariables = [ens.DataVariables; ...
11     "qMean"; "qVar"; "qSkewness"; "qKurtosis"; ...
12     "qPeak2Peak"; "qCrest"; "qRMS"; "qMAD"; "qCSRange"];
13 ens.ConditionVariables = ["Time_Unit"];
14
15 feat = extractCI(flow);
16 dataToWrite = [time_unit, feat];
17 writeToLastMemberRead(ens,dataToWrite{:})
```

Agenda

- Where do you start?
- What if you don't have the data you need?
- How do you reduce data transmission and storage costs?
- How do you deliver your analytics to different users?

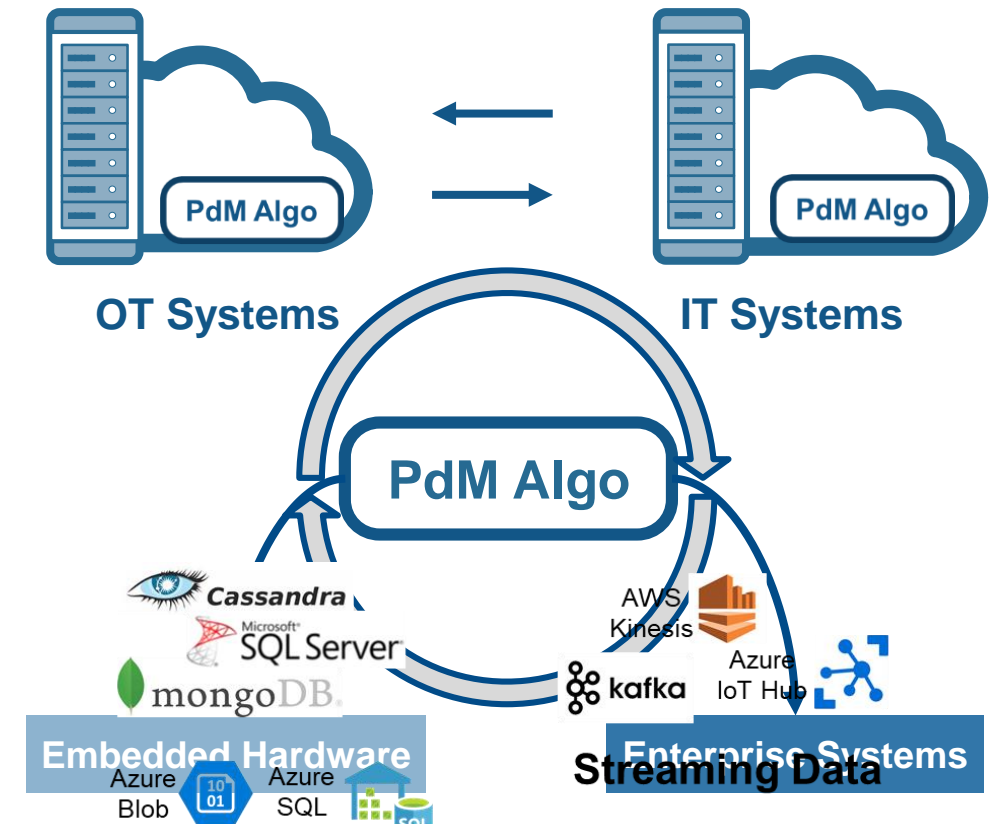

Challenges: What do your end users expect?

- Maintenance needs simple, quick information
 - Hand held devices, Alarms
- Operations needs a birds-eye view
 - Integration with IT & OT systems
- Customers expect easy to digest information
 - Automated reports

Solution: Flexible deployment of algorithms

- Can I reuse my algorithm code for deployment?
 - Code generation at the Edge
 - Libraries & executables for IT/OT systems
- How do I update my predictive model?
 - Retrain degradation models for RUL estimation
 - Retrain classification models for fault isolation
- How do I integrate with my IT/OT systems?
 - Connect to data sources & scale computations
 - Connect to dashboards & analytics platforms

Mondi: Statistics-Based Health Monitoring and Predictive Maintenance for Manufacturing Processes

One of Mondi Gronau's plastic production machines, which deliver about 18 million tons of plastic and thin film products annually.

Challenge

Reduce waste and machine downtime in plastics manufacturing plants

Solution

Use MATLAB to develop and deploy monitoring and predictive maintenance software that uses machine learning algorithms to predict machine failures

Results

- More than 50,000 euros saved per year
- Prototype completed in six months
- Production software run 24/7

[Link to user story](#)

“MathWorks Consulting’s support is among the best I’ve seen; the consultants are fast and exceptionally knowledgeable. We’ve already seen a positive return on investment from cost savings, and now we have more budget and time to complete more machine learning projects that will provide similar benefits.”

Dr. Michael Kohlert

Mondi

Why MATLAB & Simulink for Predictive Maintenance

- Where do you start?
 - Quick start with the new Predictive Maintenance Toolbox

- What if you don't have the data you need?
 - Generate failure data from Simulink models

- How do you reduce data transmission and storage costs?
 - Extract features at edge nodes

- How do you deliver your analytics to different users?
 - Deploy algorithms to embedded hardware and/or enterprise systems
